

1 ABSTRACT OF THE DISCLOSURE

2 A door leaf guiding assembly for a folding door includes two top guiding
3 brackets, two stacking brackets and multiple roller assemblies. The folding door
4 includes multiple door leaves that each has two opposite ends, and two side
5 tracks that hold the ends of the door leaves. The top guiding brackets are
6 respectively mounted on the side tracks and each has a slot to guide the door
7 leaves onto the stacking brackets. The stacking brackets are respectively
8 mounted on the top guiding brackets. The roller assemblies are respectively
9 mounted on the ends of the door leaves and each includes a top and bottom roller
10 assemblies that use conventional chain divisions that roll on the stacking
11 brackets while the door leaves are arranged in a stack on the stacking brackets.
12 Therefore, the roller assemblies are durable and of low manufacture cost.
